1st August, 2022

Dear Prof. Kimiywe:

Ref: Amendments to Approved Protocol Number PKU/2392/E1528: Long Term Health Outcomes and Dissemination Strategies for Adolescent Character Strength Interventions

I want to thank you and your committee for your approval and support of our application (ref. no: PKU/2392/E1528) for our study Long-term Health Outcomes and Dissemination Strategies for Adolescent Character Strength Interventions.

As you are aware, we have already begun the implementation of this study. With this letter, we request to make minor adjustments to our data collection with the aim of strengthening the heuristic and scientific potential of our study. As you know, in this study we are looking at the long-term health outcomes of character strength interventions. In addition, we are now interested in looking at the long-term socio-economic outcomes of these interventions. Fortunately, this can be done by the addition of minor surveys and adjusting participant compensation. We detail these proposed amendments below and look forward to your guidance:

1. Inclusion of Socio-economic outcomes to data collection tools

To investigate the long term socio-economic and livelihood outcomes, we wish to add new questionnaire – based measures to assess these outcomes as highlighted in the modified protocol under the “DATA COLLECTION TOOLS” section on page 18 (see attached). We have also included the proposed new measures to the appendix of “STUDY MEASURES” (see attached).

2. Participant compensation

As a result of the additional measures, which we anticipate will take an additional 25 minutes of participant's time, we wish to slightly increase participant's participation stipend by 200 KES totaling to the amount of 700 KES. We have highlighted this modification under the “PARTICIPANT COMPENSATION” section on page 12 of this protocol.

3. Participant recruitment

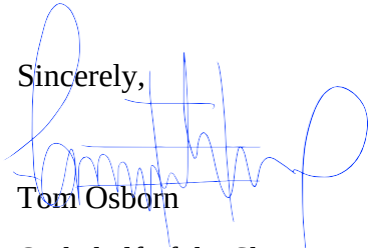

In the case that the school administrators do not have participants' current contact information, we may wish to use social media platforms to find these contact details.

Finally, for participants who are unable to travel to Nairobi for follow-up data collection, we wish to send out trained research associates to an agreed upon location that is more convenient for the participants. These modifications are highlighted under the

“PARTICIPANT RECRUITMENT” and “STUDY PROJECT AREA/REGION” sections on page 8 of this protocol.

I thank you for your consideration of this amendment to our proposal, and for your approval of our current proposal. We look forward to hearing back from you. Please let us know if you have any questions or comments.

Sincerely,

Tom Osborn

On behalf of the Shamiri study team
